

Diego Scarpati

FullStack Web3 Developer

Argentinean dev, lateral thinker, dad joke's crafter but above all, a great human.

Former senior accountant at EY who always was intrigued by programming. For me, the Covid lockdown was the kickstarter in the wonderful of development, beginning with Python and turning my way into JavaScript. Over the last year I've been working as a R&D Analyst in Argentina developing a mobile app regarding Health and Digital Identity.

Working as a developer I tend to feel like a kid who's playing a logic game, smiling and celebrating whenever I either create a new component, feature or program. Focused on UX/UI without forgetting what the product aims to solve.

What you'll get is a dev that loves to work in a diverse team, but can also do solo tasks. A former captain of a soccer team with friends on weekends, tennis player during weekdays, but also someone who will transmit positive energy and a smile everyday.

Professional Experience

Ada Souls
Web3 Fullstack Developer

MAR 2024 - PRESENT

Working with Solidity, React, Node.js, and other technologies to build a decentralized application

JavaScript

TypeScript

React

Node.js

Solidity

Flock IT
R&D Analyst

NOV 2022 - SEP 2023

React Native leader for a MVP regarding Health and Digital Identity

JavaScript

TypeScript

React

React Native

Redux

Expo

AWS

Side Projects

The HM Project

This project is a Node JS app that connects to the Real-Time LinkedIn Scapper API to search and get data jobs posted on LinkedIn that can be filtered by location, company, and job title. Also connected to the OpenAI API in order to apply further filters regarding the title, technologies required and experience and if needed, generate a cover letter for the specific desired job.

JavaScript

Node JS

Express

Python

OpenAI

Swagger

Portfolio App

By clicking here you'll have access to the Github repository to the code of this portfolio.

- TypeScript
- React
- Next.js
- Redux
- Tailwind

Crypto Prode

The prode is kind of a fantasy football game, very popular in Argentina. The Crypto Prode was intended as a game to be played during the FIFA World Cup hosted in Qatar. Solution developed in Solidity, contract never left GitHub.

- JavaScript
- React
- Next.js
- Solidity

The Movie DataBase

Looking to watch a movie or tv series and don't know in which platform to stream it? This app is for you. My first React project. It's a Front-End connected to an API that, regarding your IP location will serve you where to watch it.

- JavaScript
- React
- Redux
- Chakra UI
